

Lecture Flow

1. What is React?
2. Review fundamentals (JSX, props, state) via code examples
3. Build a simple React app => strategies for "how"

Building a React App - Big Picture Steps

- 1. Map out component hierarchy**
- 2. What state do I need and where should it live?**
3. Create component folders and JS/CSS files
4. Connect components and write placeholder JSX to make sure components render as expected
5. Write comments for each component before coding
 - a. What will this component do?
 - b. What functions do I need?
6. Flush out each component with code
